

Introduction to CS for Data Science

HW0 - Environment setup

1. The purpose of this exercise is to make sure you have installed and configured your environment properly, can write and run python scripts using PyCharm and Conda and know how to submit assignments using Moodle.
2. Read the following submission guidelines carefully:
 - 2.1. Every student should submit a solution for this exercise.
 - 2.2. All submissions must be zipped and submitted as an archive file with your ID as a filename. For example, if you submit a file called 'hw0.py', you should compress it using zip (and not rar) and name it '123456789.zip'. Only submit the archive file.
 - 2.3. Solve the exercise yourself. If you have questions, use Piazza.
3. Submit a python script that prints the following string: "hello world!".

Good luck.
